

John Gasper's Dev Troubles

Customizing things, like Grouper and Shib IdP, is problematic:

1. Repeated manual redeployments during dev cycle.
2. Setting up test scenarios on test env.
3. Co-workers cringe when asked to test/edit.
4. Locally installed the subject apps (clutter).

John Gasper's Dev Eutopia

1. Iterative dev testing is highly automated.
2. Test specific config/environment.
3. Consistent portability to other devs.
4. Clean workstation (Zen).

Resources

- Grouper Demo Info:
In the Docker Hub, search “**grouper**”
or
hub.docker.com/r/unicon/grouper-demo/
- Gradle based builds example:
On github.com/UniconLabs, search “docker”
or
github.com/UniconLabs/grouper-docker-dev-example
